Erosion Experiment | Science project | Education.com

Fact 4: Deposition of the soil particles detached by water erosion is likely in any area where the water velocity is reduced. This can be behind plant and rocks, in places where the gradient is reduced, or in water bodies such as lakes and reservoirs. Fact 5: A raindrop falls at a speed of about 20 miles per hour and it can splash wet soil up to two feet high and five feet away.
