Moon Sun And Seasons Lab Answers - pompahydrauliczna.eu

The Moon rotates on its axis and revolves around the Earth as the Earth revolves around the Sun. It takes about 27 Earth days for the Moon to rotate on its axis and about 29 ½ Earth days (month) for it to revolve around the Earth.; Because the Moon's period (time) of rotation on its axis and period of revolution around the Earth are nearly the same, the same side of the Moon always faces Earth.

During the long days of summer, the sun's altitude is high for most locations in the United States. As winter approaches, however, Page 7/29

Moon Sun And Seasons Lab Answers - ilovebistrot.it

The motions of the Moon around the Earth and of the Earth around the Sun are complex. The motions involved in revolutions are superimposed on the movements involved in rotations. The Earth and the Moon both turn on their own axis (rotation), but both also move around another object (revolution). The rotation of the Earth (24 hours) explains the alternation of day and night.

Sun-Earth-Moon - interactive simulations - eduMedia

We are diurnal, so we sleep during the night because it is dark when our space on Earth is facing away from the sun. We dress differently depending on the seasons. We eat different food depending on the seasons. Sea organisms are affected by the ocean tides that are caused by the moon.
