The circulation to the brain, arising from the arteries in the neck, is also frequently examined. In infants and younger children, a neurological exam includes the measurement of the head circumference. The following is an overview of some of the areas that may be tested and evaluated during a neurological exam: Mental status.

Neurological Exam | Johns Hopkins Medicine

Assessment Since these and other terms used to categorize LOC are frequently used imprecisely, you'd be wise to avoid using them in your documentation.1,2 Instead, describe how the patient responds to a given stimulus. For example, write:—Mr. Smith moans briefly when sternum is gently rubbed, but does not follow commands.]7

Nursing Neuro Assessment - PeaceHealth

Assessing the motor function of the patient during a neurological assessment needs to be individualised, and the techniques used are dependent on the patient's condition. For example, if the patient is conscious, the assessment is made by observing their motor response to commands such as squeeze my hands.

Head-to-Toe Assessment: Complete 12-Step Checklist

Nursing assessment is an important step of the whole nursing process. Assessment can be called the "base or foundation" of the nursing process. With a weak or incorrect assessment, nurses can create an incorrect nursing diagnosis and plans therefore creating wrong interventions and evaluation. To prevent those kind of scenarios, we have created a cheat sheet that you can print and use to ...

Complete Head-to-Toe Physical Assessment Cheat Sheet ...

Like any other aspect of the exam, the neurological assessment has limits. Testing of one system is often predicated on the normal function of other organ systems. If, for example, a patient is visually impaired, they may not be able to perform finger to nose testing, a part of the assessment of cerebellar function (see below).

UC San Diego's Practical Guide to Clinical Medicine

The neurological examination is most valuable when it is guided by hypotheses that the physician formulates as the history is elicited. For example, if a right-handed patient reports an episode of difficulty in speaking, the examiner will search for signs of left hemisphere dysfunction: right hemiparesis and hemisensory disturbance.

Summary of the Neurologic Exam

A focused neurological assessment includes collecting subjective data about the patient's history of head injury or dysfunction, collecting the patient's and the patient's family's history of neurological disease, and asking the patient about signs and symptoms of neurological conditions, such as seizures, memory loss (amnesia), and ...
