Honey is a solution with high viscosity and most types of honey exhibit Newtonian behavior. However, some types show non-Newtonian features (thixotropy or dilatancy), which exerts influence on processing of the honey. The aim of this study was to evaluate the rheological properties of honey from Eucalyptus spp.

The combination of 28 kHz and 40 kHz ultrasonic frequencies and 40 W and 80 W ultrasonic powers applied to honey did not change the fluid properties of honey. It was found in the rheological experiment that 40 kHz 80 W combination had the greatest influence on the rheological properties of honey, while the 28 kHz 80 W and 40 kHz 40 W combinations had the middle influence and were similar to each other, while the 28 kHz 40 W combination had the least influence on honey, which was ...
