The complete list (and documentation) can be found at the Appcelerator Documentation about Alloy Data Binding. So, a simple setup can be done in Alloy like this:

Enhancing Titanium: How to set up Collections with ...

I wanted to build useful apps that produced compelling user experiences. I tried several mobile libraries/tools to penetrate hybrid/native mobile circles: Sencha Touch, PhoneGap, Ruby Motion, Appcelerator's Titanium Platform, and others. In my opinion, Titanium seemed like the most promising platform because of the Alloy Framework.
